Education
Bethel Tech : Woz-U   **09/2012**
Full Stack Web Development Program

Projects

Agile Group Project: SoundBridge

https://github.com/bethel-school-of-technology/soundbridge-frontend

https://github.com/bethel-school-of-technology/soundbridge-backend

SoundBridge was developed with one thing in mind. Connecting Artists and Listeners in a tight night community. Not only are artists able to post and share updates about concerts but also able to place voting polls for listeners to have a voice on set lists and tour locations. This in turn helps with concert turnouts and higher revenue per concert.Listeners are also encouraged to connect with like minded users with similar taste in music. With the ability to post and share curated playlists soundbridge a place where melomaniacs alike discover amazing music.

SoundBridge was developed using the MERN stack. React was used for the front end due to its lightweight design and smooth SPA routing, Node and Express for the backend and mongodb as the database. We used hapi/joi for schema validation and Passport with JWT tokens for authentication.

Individual Project: Car Culture

https://github.com/Thedbzr/CarCulture

An Ionic Angular StoryBook App. Car Culture is an informative mobile book on the evolution of Car Culture from the days of old to today's modern Car scene.

Its built using Ionic and Angular with Cordova.

Individual Project: Weather App

A Weather App built on React. Your able to search Weather based on City and Country.

For this Weather app i used the MERN stack. Using OpenWeathers API and favicon users are able to check the current weather of a city with a high and low description as well as a correlating weather icon.
